The following list provides a short introduction to Photoshop's different features. Advanced Editing Tools One of Photoshop's most powerful tools is its ability to alter images using layers. Layers provide great versatility, enabling you to insert, move, and delete them just as you do with the objects you add to your image. A layer is different from an image or a group of objects. You can group objects (in addition to layers) into a single Photoshop document if you want to apply multiple edits to the same image. You can also combine layers to create more complex effects. You can add some items to a layer and change its opacity. With other layers, you can add another set of items and bring them to the top, including transparent areas. With layers, you can create a new layer where you place a graphic you want to work on and another layer where you work on the items you've placed. The transparency feature that you can use with layers helps add more depth to your image. If you place an image on a transparent layer, you can see the image layer beneath it through the transparency. This feature is a great way to mask out a background from your image. Figure 13-12 shows a layer with an item on top, with a separate layer beneath. **Figure 13-12:** Use layers to add depth and transparency to your image. Photoshop offers many different tools that you can use to get around in the various layers of an image. To start using these tools, you need to group your image. You can do this in Photoshop by following these steps: 1. Choose Edit⇒Transform Tools⇒Group. A dialog box opens that enables you to group your image. 2. Drag and drop the layers on top of each other to group them into a single layer. 3. To bring the grouped layers to the front, click the frontmost layer to select it. 4. Click the Move tool or press the K key to move it. 5. Click and drag the layer to the location you want it to appear. 6. In the Properties panel, use the arrows to navigate your image, pressing and releasing the mouse button to move to a new location. 7. When you're finished manipulating the layer, click the eye icon in the top-right corner of the layer, as shown in Figure 13-13, to deselect it.

opinion Why we need 'generational equity' now more than ever When your child asks you where they come from, what will you say? As we head into 2018, equity issues are front and center in the new California. They're part of the reasons thousands of young people have been getting arrested for protesting in the streets, and why California's AB 60 — which sparked the state's housing crisis — finally passed the Assembly. This is the story of how California's student protesters, and the young Californians in general, helped create a demand for a more just state. The California Dream is alive and well — but is it possible that the dream was created out of the ashes of systemic injustice? For example, California's $53 billion Proposition 13, which gave the financial elite a permanent tax break in exchange for $13 billion per year in public services, eventually wiped out $17 billion annually in local property taxes. In other words, the California Dream is now a reaction to a past condition of systemic injustice. The California Dream was originally formed out of the ashes of systemic injustice. Since 1982, Proposition 13 has remained an integral part of California's tax system and its politics. Many Californians have come to believe Proposition 13 has been enacted in order to protect property rights. But while property is guaranteed by the California Constitution, it's not a right from which everyone benefits. Until recently, the vast majority of homeowners have been the only ones to benefit from Proposition 13. We need to change this. A new sentiment The youthful spirit that drove the 2016 presidential election was not as prevalent as it was in 2016. We had a young president in Barack Obama and millennials, the fastest-growing generation in America, were running the universities. Obama's victory in 2008 seemed almost permanent. He was the first president since the 1960s to win a second term. However, the next election revealed a new feeling among voters. Obama was like a president from the past, and the new voters who represented the future. As California voters — especially those under the age of 45 — voted overwhelmingly for Hillary Clinton, one of the main issues was about enthusiasm. Clinton's supporters were overwhelmingly young, dynamic and optimistic. The 2016 presidential election felt like something new — generational change. Clinton's supporters were the youngest generation that had been in power for a while. The current generation of college students, the young people just entering the job market and those

Q: How can I change the class of an element in HTML using AngularJS? I have a div element that I want to toggle between a hidden element and a display element. I am trying to toggle the display between false and true to achieve this. I currently have: The HTML: Resize Show The hideOrShow = true and hideOrShow = false toggle between these states, which sets whether the div is visible or not. I have also tried this: hideOrShow = false and hideOrShow = true toggle between these states, which sets whether the div is hidden or not. Both of these are to hide or show the div, but do not toggle between both states. How can I fix this? A: To toggle between open and closed, use ng-show and ng-hide. ng-show and ng-hide take an expression, so you need to put your logic in there. (the expression changes if you change hideOrShow in your model) You also need to remember ng-show and ng-hide get evaluated asynchronously (see the AngularJS Documentation for more information on the difference between synchronous and asynchronous execution). In your case, you want to have the div's visibility change at the same time as what's in scope: Here's a jsFiddle Alternatively, if you want to just toggle an element between open and closed with no logic, you can also use ng-class.
